Apache Ambari : Release Notes 1.2.1

Copyright © 2012, 2013 Hortonworks, Inc. All rights reserved.

The Hortonworks Data Platform, powered by Apache Hadoop, is a massively scalable and 100% open source platform for storing, processing and analyzing large volumes of data. It is designed to deal with data from many sources and formats in a very quick, easy and cost-effective manner. The Hortonworks Data Platform consists of the essential set of Apache Hadoop projects including MapReduce, Hadoop Distributed File System (HDFS), HCatalog, Pig, Hive, HBase, Zookeeper and Ambari. Hortonworks is the major contributor of code and patches to many of these projects. These projects have been integrated and tested as part of the Hortonworks Data Platform release process and installation and configuration tools have also been included.

Unlike other providers of platforms built using Apache Hadoop, Hortonworks contributes 100% of our code back to the Apache Software Foundation. The Hortonworks Data Platform is Apache-licensed and completely open source. We sell only expert technical support, [training](#) and partner-enablement services. All of our technology is, and will remain free and open source. Please visit the [Hortonworks Data Platform](#) page for more information on Hortonworks technology. For more information on Hortonworks services, please visit either the [Support](#) or [Training](#) page. Feel free to [Contact Us](#) directly to discuss your specific needs.

1. Apache Ambari v.1.2.1 Release Notes

This document provides information on this release of Apache Ambari.

1.1. Version

This release (1.2.1) of Apache Ambari is based on [Ambari 1.2.1-rc0](#) with no additional patches

1.2. New Features/Improvements

This release (1.2.1) of Apache Ambari includes the new features and improvements:

- Confirm Host screen now checks for potential conflicts in host selection.
- Performance on Jobs View improved, with server side paging and sorting. List no longer limited to most recent 500 jobs.
- DAG UI updated to provide more intuitive display.
- If installation fails, can re-start process without having to manually uninstall first.
- Can customize users for master services.
- Can upgrade Ambari server without having to reinstall entire stack.
- Can manage clusters where external hostnames do not match internal hostnames (for example, on ec2)

1.3. Fixed Issues in 1.2.1 from 1.2.0

To see a list of the issues that have been fixed that were noted in the release notes of the last release (1.2.0) of Apache Ambari, use the following query:

```
http://s.apache.org/release\_notes\_1.2.0\_fixed
```

or click [here](#).

1.4. All Issues Fixed in 1.2.1

To see a list of the all issues that have been fixed for version 1.2.1, use the following query:

```
